NIMBUS

An outstanding new pump built to the ISO International and metric standards

NIMBUS — a new metric range of standard, single entry, general purpose pumps, manufactured to ISO/DIS 2858 and DIN 24255 dimensions, with a single mechanical and hydraulic concept, but having a comprehensive coverage of duties in output and head.

Capacities range up to 1000m³/h (4000 g.p.m. approx), and heads up to 120 metres (400 ft approx). The hydraulic design of the impellers is a product of the latest research and technology, combining maximum efficiency with good suction performance.

Shrouded impellers are employed, having balance holes to relieve pressure in the area of the gland/seal, and to reduce the hydraulic end thrust. Close grained cast iron is the material which will normally be used for the impellers, but the alternative of gunmetal is available for certain applications.

Nimbus pumps are of back pull-out design and can be dismantled without disturbing the pipework or motor when used with a spacer coupling, thereby reducing maintenance time.

One of the principal features of this new design is that twenty seven hydraulic units can be fitted to three basic bearing assemblies, a clear indication of the degree of standardisation that has been achieved.

Nimbus pumps can be used for most pumping applications where large solids are not present. Liquids able to be pumped range from water of varying purity in domestic water supplies, drainage, irrigation, and general circulation duties in industry and agriculture, to oil, chemicals and petroleum products.

Nimbus pumps are manufactured by Brown Brothers Engineers Ltd of Christchurch, to the design of Allen Gwynnes Pumps Ltd, of Bedford, England.

The journal of

THE N.Z. INSTITUTION OF ENGINEERS, Fourth Floor,
Molesworth House, 101 Molesworth Street, P.O. Box
12-241, Wellington 1.

President, D. A. THOM, C.ENG., F.I.C.E., F.N.Z.I.E.

Secretary, A. J. BARTLETT, M.A. (OXON)

Designed for

The New Zealand engineer and planned to cover all
aspects of professional engineering. This journal is
received by all members of the N.Z. Institution of
Engineers.

Opinions expressed in the journal are not necessarily
those of the Institution or of the publishers.

Published monthly by

FLEXLOCK

Flexible Metallic Tubing of Wanganui Manufacture
STRENGTH - LIGHTNESS - FLEXIBILITY

Strength with lightness and flexibility FLEXLOCK tubing in galvanised steel and stainless steel is now manufactured in New Zealand to British Standards in bore sizes $\frac{3}{4}$ " to 8".

Asbestos packed, locked section tubing, FLEXLOCK is suitable for modest pressure duties, for exhaust, ducting, and dust extracting, also copper wire packed for engine exhaust duties.

Always at your fingertips

(or somewhere that can't be found when it's urgently needed?)

Answers to all these questions

- **Who's the New Zealand agent?**
(for over 1 700 cverseas electrical firms represented here)
- **Who makes that brand?**
(for almost 700 brand names of New Zealand-made electrical products)
- **What is the New Zealand manufacturer's or representative's address?**
(for nearly 300 local electrical firms or electrical equipment manufacturers)
- **Which official do I write to?**
(including Government departments with electrical branches, all electric supply authorities, and all important officials and organisations involved in the electrical industry)
- **Are they consulting electrical engineers?**
(all electrical consulting firms in New Zealand alphabetically listed)
- **Where is the nearest registered electrical contractor?**
(all geographically listed)
- **Who are the branch secretaries of the N.Z. Institute of Electricians?**
(for all 30 branches with their addresses)
- **When and where is that conference?**
(dates and venues of all appropriate national conferences)

If you can answer all the above questions then you don't need the "Electrical Directory 1979"

If you can't, you do

The information in it may be priceless but the cost is only \$3.00 post free
